Location: Chicago, IL | Email Address: [amallen046@gmail.com](mailto:amallen046@gmail.com)

## SUMMARY

Software engineer adept at architecting robust and scalable software solutions with a focus on optimizing performance and user experience. Skilled in a variety of programming languages and frameworks to deliver high-quality and responsive applications. Experienced in seamlessly integrating with cross-functional teams to drive innovation and achieve project objectives.

## EDUCATION

**Bachelors of Science in Computer Science** - University of Wisconsin Madison

## SKILLS

Typescript, Javascript, React.js, Next.js, Vue.js, Redux, GraphQL, HTML, CSS, SASS, Tailwind, Python, Java, Node.js, Express.js, Optimizely CMS, Contentful CMS, MySQL, MongoDB

## EXPERIENCE

### **Frontend Developer**

Nansen (06/2022 - 06/2023)

- Worked on modern web applications for a span of 7 global ecommerce clients using React, Typescript, Vue, and CMS platforms such as Optimizely and Contentful
- Optimized website performance using tools such as Google Lighthouse to identify bottlenecks on webpages, resulting in a 20% reduction in page load times.
- Conducted code reviews and provided constructive feedback to maintain code quality
- Integrated third-party APIs and libraries to enhance website functionality increasing user growth by 15%

### **Frontend Engineer**

Helium Books (02/2022 - 05/2022)

- Leveraged Next.js, HTML, and CSS to develop responsive and interactive web pages
- Collaborated in an Agile environment with developers and stakeholders to meet project goals
- Utilized browser developer tools to efficiently troubleshoot and fix bugs
- Ensured cross-browser compatibility and implemented accessibility standards such as WCAG 2.0 for consistent user experiences

## CERTIFICATIONS

Amazon Web Services (AWS) Certified Cloud Practitioner (08/2023)

## PROJECTS

### **Feedback App**

- Developed a user-focused feedback platform using React, Redux, MongoDB, Node.js, and Express.js. Users can create, organize, and categorize feedback requests with comments, upvotes, and status tracking.
